Research

Doctoral Thesis.....

Title: *A study of Galois and flag orders*

Advisor: Jonas T. Harwig

Description: This dissertation had three main focuses. Firstly, describing an alternating analogue of $U(\mathfrak{gl}_n)$ and its representations. Second, a technique for converting a Galois ring to a Galois order via localization. Finally, it described maps between different standard flag orders with related data.

Masters Thesis.....

Title: *Galois Embeddings*

Supervisor: Anthony Bevelacqua

Description: This thesis focused on extending Galois extensions to new Galois extensions that remained Galois over the original field. In particular, it focused on quadratic extensions over \mathbb{Q} .
